GEI ARRANGING FINANCING FOR SOLAR FACILITIES

Today, GEI announced a solar distributed generation program to provide financing for distributed solar generation facilities that will be installed and operated in the state of California. A spokesman for the company stated that GEI intends to establish an investment company, GEI Solar Systems I, LLC, to facilitate the financing.

GEI is completing the engineering, design and procurement phases for the projects. The company believes the financing facility will be sufficient for GEI Solar Systems I, LLC to complete a total of nearly 2.5 megawatts of clean distributed solar generation projects. GEI expects the distributed solar generation facilities will be installed and commissioned before the fourth calendar quarter of 2009.
